SUMMARY

Full Stack Java Developer with hands-on, project-driven experience building secure, scalable microservices and automation platforms across **Fintech and MarTech domains**. Proficient in Java, Spring Boot, Spring Security, and REST APIs, with production-grade deployments leveraging RabbitMQ, Redis, and PostgreSQL. Independently designed and built Python (FastAPI) microservices integrated with Java applications, alongside Resilience4j patterns (circuit breaker, rate limiting, retry, bulkhead), AWS S3, Linux administration, and Selenium-based social media automation with advanced multithreading. Passionate about delivering high-availability solutions with strong security, performance, and measurable business impact.

EDUCATION

Marathwada Mitra Mandal's College of Commerce (MMCC)

Jun 2021 – April 2024

Savitribai Phule Pune University

Bachelor of Business Administration in Computer Applications (BBA-CA) **CGPA :- 8.25**

WORK EXPERIENCE

Software Engineer

mPHATEK Systems Pvt Ltd

Aug 2025 - Present

Project: OmnisPay – Live Fintech Payment Gateway Platform

Payment Gateway Integration & Security

- Contributed to a Payment Orchestrator architecture that centralizes routing across multiple payment gateways. Collaborated with senior engineers to integrate the Tabby payment gateway into the platform, gaining in-depth understanding of payment gateway integration flows, transaction lifecycle, and webhook-based status handling.
- Designed and implemented a hybrid encryption architecture using AES and RSA algorithms to secure communication with client/frontend applications, improving overall security posture by 35%
- Worked alongside senior engineers to implement HMAC-based security for guest checkout payment link generation on an e-commerce product, developing complete end-to-end understanding of the HMAC validation flow.

Asynchronous Processing

- Built an asynchronous invoice generation system using RabbitMQ to ensure admin-mandated invoices are generated for every transaction regardless of user preference, while reducing payment link generation time by up to 40% for users who opted out of invoices.

Security Vulnerability Remediation (VAPT)

- Independently resolved a VAPT-flagged device-fingerprint authentication vulnerability in the mobile app: designed a RabbitMQ-based consumer mechanism to detect and invalidate a previous user's encrypted device ID when a new user logged in on the same device — eliminating cross-user activity notification leaks without impacting system performance.
- Resolved multiple API tampering vulnerabilities identified during VAPT audits.
- Implemented rate limiting on payment link generation APIs to remediate a VAPT-identified abuse vector.

Access Control & Performance

- Designed and implemented domain-based access separation between user and admin portals: built JWT filter logic to validate requests by role and origin domain, backed by Redis caching with scheduled eviction to reduce redundant database calls.
- Developed and deployed 30+ production-grade secure REST APIs using Java, Spring Boot, and Resilience4j (circuit breaker, rate limiter) patterns.
- Built and deployed application JARs to containerized environments as part of release workflows.

Project: Social Voice – Social Media Automation Platform

- Developed an internal automation platform enabling bot accounts on Instagram, Facebook, and Twitter to automatically post text and images from a centralized dashboard, eliminating manual posting effort.
- Engineered multithreaded execution engine: when 50 bot accounts are selected, accounts are partitioned into configurable blocks (e.g., 5 accounts/block) and executed concurrently — each thread independently handles one block, maximizing throughput and resilience.
- Implemented Java Selenium automation for Chrome browser login and activity simulation across social media platforms, enabling realistic human-like interactions.
- Integrated AWS S3 for image storage and retrieval, enabling media attachments in automated posts with scalable, low-latency access.
- Built secure inter-service communication between Java and Python microservices, handling request validation, response processing, error handling, and retry mechanisms for reliable execution.

Full Stack Java Developer (Intern)

March 2025 – Aug 2025

IKSC Knowledge Bridge Pvt. Ltd

Project: Student Performance Management System

- Designed and developed a Student Performance Management System automating evaluation, grading logic, and analytics — reducing manual processing time by 50% and improving result accuracy.
- Built scalable RESTful APIs using Java, Spring Boot, and Hibernate (JPA), enabling efficient data management and high-performance backend operations.
- Implemented Spring Security with JWT authentication and role-based access control (RBAC), enforcing fine-grained authorization and securing sensitive academic data.
- Designed stateless authentication mechanisms including user registration, login, JWT token issuance, token validation, and protected endpoint access.
- Built responsive React and Redux dashboards for real-time analytics and performance monitoring, improving user experience and administrative efficiency.

- Developed responsive web interfaces using HTML, CSS, and JavaScript, enhancing usability and accessibility across multiple devices.
- Collaborated with development teams to implement frontend features and improve overall user experience.
- Debugged and resolved UI issues, ensuring consistent functionality and visual quality across the application.

TECHNICAL SKILLS

- Languages:** Java (8/17), Python, JavaScript, HTML, CSS
- Frameworks:** Spring Boot, Spring Security, Spring JPA, React, Redux, FastAPI
- Messaging & Cache:** RabbitMQ, Redis, Apache Kafka
- Resilience:** Resilience4j — Circuit Breaker, Rate Limiting, Retry, Bulkhead, Fallback
- Automation:** Java Selenium (Chrome browser, social media automation), Multithreading
- Cloud & DevOps:** AWS (S3), Linux, Docker, Git, SLF4J/Logback
- Databases:** PostgreSQL, MySQL
- Core CS Fundamentals:** Data Structures & Algorithms, Problem Solving, Object-Oriented Programming
- API Standards:** REST APIs, Microservices, JWT Authentication, Encryption/Decryption

CERTIFICATIONS

Full Stack Java Developer Certification	Oct 2023 – May 2024
Gained practical experience in end-to-end Java web application development.	
Claude Code 101 – Anthropic Academy	2026
Completed Anthropic's official course on using Claude Code as an AI coding agent for daily development workflows, including the Explore → Plan → Code → Commit workflow.	
AI Fluency: Framework & Foundations – Anthropic Academy	2026
Completed Anthropic's foundational course on effective, responsible collaboration with AI systems.	

HOBBIES

- Coding
- Listening to Music
- Fitness
